

TASK 5 – EMPLOYEE PRODUCTIVITY SNAPSHOT

Task Requirements

- Tasks completed per person, per week
- Average time-to-completion per task
- A simple visual ranking employee performance
- Deliverable: dashboard/report + 1-page summary of findings

Tools Used

Microsoft Excel was used to prepare the task-tracking data, create PivotTables, calculate average completion time, and build the employee performance ranking chart.

1. Weekly Tasks Completed

This PivotTable shows how many tasks each employee completed in each week. Status is filtered to Completed, so only finished tasks are counted.

The screenshot shows the Microsoft Excel interface with a PivotTable titled 'Weekly Tasks Completed'. The PivotTable is based on the 'Employee_Productivity_Tracking_Dataset (1)' and is filtered by 'Status' to 'Completed'. The PivotTable layout is as follows:

Count of Task ID	Column Labels				
Row Labels	2026-W32	2026-W33	2026-W34	2026-W35	Grand Total
Abena Owusu	3	2	2	2	9
Akosua Nyarko	4	4	1	1	10
Ama Mensah	4	2	2	4	12
Efua Addo	1	1	4	2	8
Kofi Osei	4	3	2	2	11
Kojo Antwi	2	4	2	3	11
Kwame Asare	2	4	4	3	13
Yaw Boateng	3	3	3	2	11
Grand Total	23	23	20	19	85

The PivotTable is displayed in the 'Weekly Tasks Completed' worksheet, with the 'Task Tracking' worksheet visible in the background. The status filter is set to 'Completed'.

2. Average Completion Time

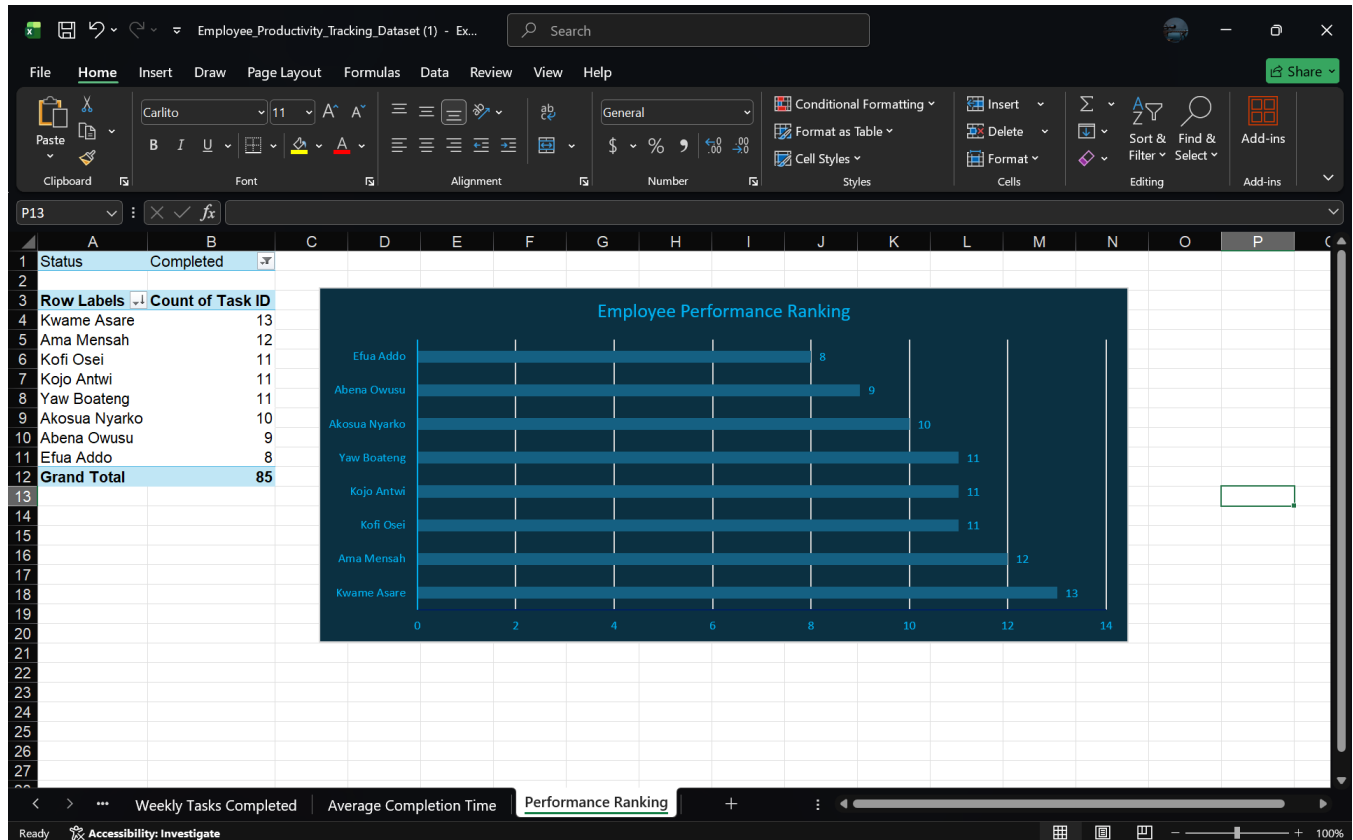

This PivotTable shows the average number of days each employee took to complete tasks for each week. Values are displayed to two decimal places.

The screenshot shows an Excel window titled "Employee_Productivity_Tracking_Dataset (1) - Ex...". The ribbon is set to "Home". The PivotTable is located in the range A5:F13. The PivotTable fields are: Rows: "Time to Complete", Columns: "Column Labels", and Values: "Grand Total". The data is summarized by employee (rows) and week (columns).

Time to Complete	2026-W32	2026-W33	2026-W34	2026-W35	Grand Total
Abena Owusu	3.00	3.50	3.00	3.00	3.11
Akosua Nyarko	1.75	2.25	3.00	1.00	2.00
Ama Mensah	1.50	4.00	3.00	2.50	2.50
Efua Addo	3.00	2.00	2.50	3.50	2.75
Kofi Osei	3.00	3.67	3.00	4.00	3.36
Kojo Antwi	2.50	3.00	3.50	3.00	3.00
Kwame Asare	3.00	2.50	2.50	4.00	2.92
Yaw Boateng	4.00	2.33	2.00	1.50	2.55
Grand Total	2.61	2.87	2.70	2.95	2.78

3. Employee Performance Ranking

The clustered bar chart ranks employees by total completed tasks, with the highest-output employee at the top.

EMPLOYEE PRODUCTIVITY SNAPSHOT – SUMMARY OF FINDINGS

The Employee Productivity Snapshot was developed to provide managers with a clear weekly view of team output and task completion efficiency. The analysis focused on three main areas: the number of tasks completed by each employee per week, the average time taken to complete tasks, and an overall performance ranking based on completed tasks.

Across the four-week period, the team completed a total of 85 tasks. Weekly productivity was highest in Week 32 and Week 33, with 23 completed tasks in each week. This decreased to 20 tasks in Week 34 and 19 tasks in Week 35, showing a gradual decline in total team output toward the end of the period.

In terms of individual productivity, Kwame Asare recorded the highest output with 13 completed tasks, followed by Ama Mensah with 12 tasks. Kofi Osei, Kojo Antwi, and Yaw Boateng each completed 11 tasks, while Akosua Nyarko completed 10, Abena Owusu completed 9, and Efua Addo completed 8 tasks. The performance ranking chart makes these differences easy to compare and highlights the employees with the highest task output.

Task completion efficiency was also analyzed using the average number of days required to complete assigned tasks. The overall average completion time was approximately 2.78 days per task. Weekly averages were 2.61 days in Week 32, 2.87 days in Week 33, 2.70 days in Week 34, and 2.95 days in Week 35. This indicates that most tasks were completed within about three days, although completion time varied between employees and across weeks.

Overall, the analysis shows that the team maintained a relatively consistent level of productivity, although output declined slightly in the final weeks. The combination of completed-task counts, average completion time, and performance ranking provides managers with a simple but effective way to monitor employee output, compare performance, and identify areas where workload management or additional support may be needed.
